

ABSTRACT

A cable lock that is locked and unlocked through the movement of a set of combination dials. The combination dials are used to provide a proper combination. Upon entry of the proper combination, a knob is used to actuate a lever which releases a locking clamp. A cable is passed through a cable passageway and secured therein when the locking clamp is released. The cable lock may include an unlocked position, a locked position, and a cinch position. Additionally, the lock may include a rest feature to allow the proper combination to be reset.
